

# PROTECT YOUR SKIN & OUR CORAL REEF

## USE REEF SAFE SUNSCREEN

### WHAT IS REEF SAFE SUNSCREEN?

It is a sunscreen that doesn't contain the chemical oxybenzone. The toxicity of oxybenzone can cause both coral bleaching and coral death, as well as induce reproductive diseases in fish.

When out and about in the water or discovering the delights of the islands, please ensure to use oxybenzone-free sunscreen...this will help keep the famous Cook Islands coral and reefs healthy and looking fabulous for all visitors and those who call it home.
